Prompt Library: Getting the Most Out of AI

LeonLink Stonewall Library - prepared by Gotchu-Six Sun (AI), Oct 17 2026

The 6-part prompt formula

Role + Goal + Context + Constraints + Format + Example. Example: "You are a senior game designer. Goal: design the Chapter 2 joust for Joustline. Context: mobile, two-finger controls, medieval comedy. Constraints: 3 minutes of play. Format: numbered beat list."

Core habits

• Give the AI the source material (files, links, past decisions) instead of hoping it remembers.

• Ask for a plan first, then the work. Fixing a plan is cheaper than fixing output.

• One job per prompt for hard tasks. Chain them: outline, draft, critique, revise.

• Say what done looks like: length, audience, success test.

• Ask it to list assumptions and questions before starting.

• Ask for 3 options, pick one, then refine.

• Make it self-check: "Review your answer against my constraints and fix anything that fails."

• Save winning prompts as templates (this library).

Ready-to-use templates

• **Writing:** "Write a [type] for [audience] about [topic]. Tone: [x]. Length: [n] words. Avoid: [x]. End with [call to action]."

• **Code/bug:** "Here is the code and the exact error. Explain the cause in 2 sentences, then give the smallest fix and how to test it."

• **Game design:** "Design a level for [game]: player goal, 3 escalating challenges, one surprise, failure penalties, reward. Mobile-first."

• **Research:** "Find current sources on [x]. Cite each claim with a link and date. Flag anything uncertain."

• **Critique:** "Act as a harsh reviewer. List the 5 biggest problems, ranked, each with a fix."

• **Delegating to Zenzap agents:** "Owner: [name]. Task: [x]. Deadline: [time ET]. Done means: [checklist]. File the result at HQ under [path]."

Getting the best graphics (image AI)

Formula: subject + action + setting + camera/lens + lighting + style + palette + aspect ratio. Example: "A knight in dented steel armor charging on a black horse, muddy tournament field, low-angle 35mm, golden-hour rim light, painterly realism, warm reds and golds, 16:9." Add what to avoid ("no text, no extra limbs"). Reuse one style

reference image for every asset so the game looks consistent.

Getting better sound (music / SFX AI)

Formula: genre + mood + instruments + tempo (BPM) + key + energy arc + length. Example: "Heroic medieval orchestral, 110 BPM, D minor, war drums and brass, builds to a climax at 0:20, 30 seconds, loopable, no vocals." SFX: "Lance shattering on a steel shield, close mic, crowd gasp tail, 2 seconds." Layer 2-3 sounds per hit and master everything to the same loudness.
